

Series $x(t)$

Detector S_D

Statistics B

Standalone

$$S_D \rightarrow q_D \rightarrow L_D$$
$$U_D = L_0 - L_D$$

Conditional

$$B \rightarrow q_B \rightarrow L_B$$
$$(B, S_D) \rightarrow q_{BD} \rightarrow L_{BD}$$

Matched held-out points, probe family, weights

$$\text{CDU} = L_B - L_{BD}$$
